

Gain Clarity and Control Over the Systems That Run Your Business

ReadyWorks is a digital platform conductor. It integrates data from all your sources to give you a complete picture of your IT estate – hardware, applications, users, and all their interdependencies. ReadyWorks then uses this data to orchestrate 80% of the workflows required for asset lifecycle management, a planned migration, or to respond to changes in your environment.

ReadyWorks:

Integrates IT and Business Systems

Use prebuilt, bi-directional connectors to IT and business systems or build your own through our intuitive, low-code interface. Our connectors allow you to collect information from these systems, update information in them, send commands to them, and monitor responses to those commands. ReadyWorks eliminates the need for custom scripts with an automated, highly configurable, front end.

Analyzes & Cleans Your Data

There are multiple “sources of truth” when it comes to data. Each source provides one piece of the puzzle. Combine data from all sources to make better decisions.

Generates Insights

Fueled by clean data, ReadyWorks generates actionable insights to achieve IT and business goals.

- Identify cost savings opportunities for hardware provisioning and refresh programs.
- Eliminate overspending on software licenses.
- Identify and mitigate compliance and security risks.
- Improve the digital employee experience.
- Identify EOL hardware and operating systems and orchestrate workflows to migrate these systems.

Automate and Orchestrate Workflows

ReadyWorks orchestrates all the workflows and tasks required to manage migration programs or changes in your environment. Workflows are triggered based on readiness criteria for migration programs or to react to changes in your environment.

USE CASES:

Asset Lifecycle Orchestration

- Hardware & Software ITALM
- Data Center Assessment
- Application Analysis & Certification
- Refresh Forecasting & Optimization

Migration Planning & Orchestration

- Windows 11 Migration
- VDI Migration
- Cloud migration planning
- Windows Server EOL
- M&A Planning & Orchestration

Governance, Risk, and Compliance

- Cybersecurity Threat Assessment
- ISO/IEC 19770-1:2017 Compliance
- DORA (Digital Operational Response Act)
- CISA BOD 23-01 Response
- ESG Analytics & Reporting
- Operation Risk Response Orchestration
- Policy Management & Configuration

End User Experience

- User onboarding / offboarding
- DEX Response Workflow

Incident & Event Response

- Troubleshooting
- Proactive maintenance

CASE STUDY

USE CASE

Windows Lifecycle Management

BUSINESS OUTCOMES

- \$4.6M cost savings (97% reduction).
- >80% time reduction on Windows Servicing.
- From 16 months with 12 technicians to 3 months with 2 technicians.
- 90,000 machines upgraded in 90 days.

CASE STUDY

USE CASE

Windows Lifecycle Management

BUSINESS OUTCOMES

- 2000 hours of manual effort eliminated every year.
- Reduced security and compliance exposure.
- Accurate application and device inventory.
- Fully automated Windows servicing solution.
