It's time to make your tools work together.

Enterprises have made strategic investments in an ecosystem of IT platforms, vendors, and internally developed solutions. Unfortunately these systems don't work together, resulting in:

Blind spots. These result in high levels of risk for the business and inadequately informed decision making.

Manual processes. These translate to substantial waste in the form of program overruns, misallocated resources, and unnecessary spending.

Unrealized ROI. Teams are unable to leverage all of an organization's technology investments.

BENEFITS:

- **Faster and more effective attainment of business objectives**
- **Elimination of risk associated with blind spots and broken processes**
- **Reduction in program timelines and cost**
- **The ability to automate low-level tasks to free up high-level resources**

ReadyWorks is a digital platform conductor (DPC). It combines system integration, data intelligence, and workflow automation in one unified solution. Organizations use ReadyWorks to gain valuable insights into critical aspects of their business, standardize the information in their systems of record, and automate business processes that are stalled or being handled manually.

ReadyWorks:

Integrates IT and Business Systems: Use prebuilt, bi-directional connectors with IT and business systems or build your own through our intuitive, low-code interface. Our connectors allow you to collect information from these systems, update information in them, send commands to them, and monitor responses to those commands. ReadyWorks eliminates the need for custom scripts with an automated, highly configurable, front end.

Analyzes & Cleans Your Data: There are multiple "sources of truth" when it comes to data.
Each source provides one piece of the puzzle. Combine data from all sources to make better decisions.

Generates Insights: Fueled by clean data, ReadyWorks generates actionable insights to achieve IT and business goals. For example:

- Detect and mitigate compliance and security risks.
- Optimize cloud costs to accurately forecast business needs, cost allocation, and more.
- Identify ways to eliminate technical debt.
- Tie power utilization back to the business to model true usage of data center resources.
- Improve the digital employee experience.
- Identify EOL hardware and operating systems.
- Analyze hardware inventory for asset refresh cycles.

Automate and Orchestrate Workflows: ReadyWorks orchestrates all the workflows and tasks required to run any business process.
